CONVECTION
OVENS

Pacsetter

Parts Still Available

GARLAND produces both Electric and Gas Convection Ovens.

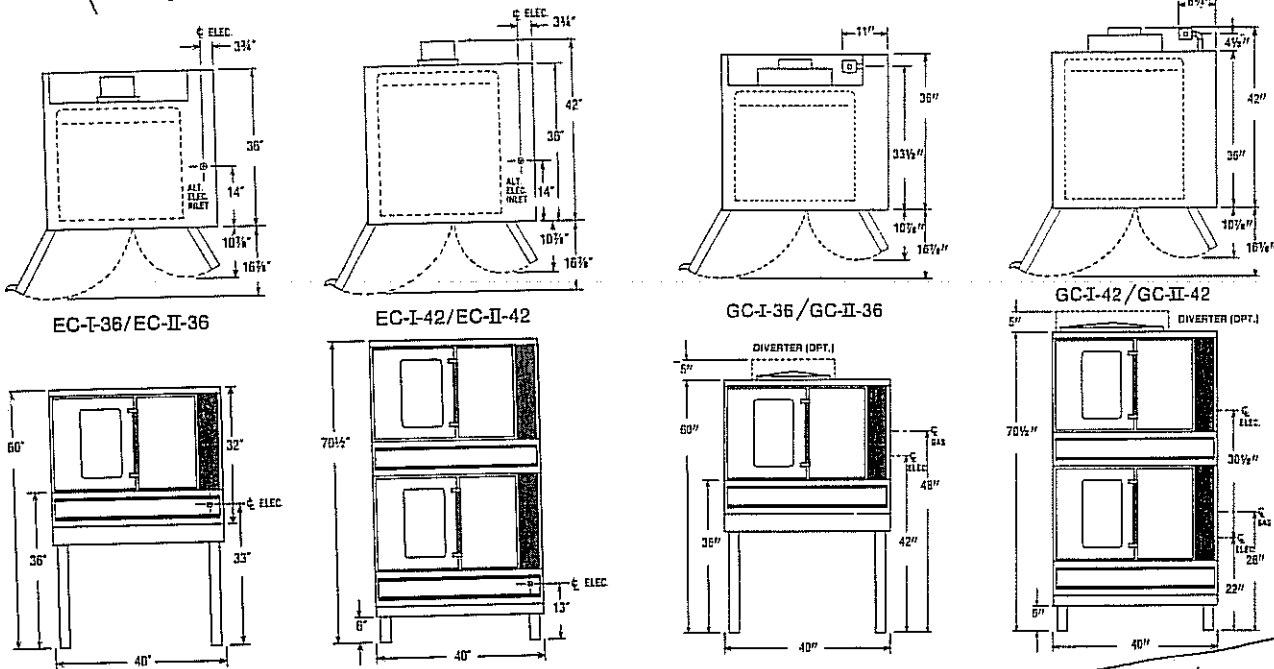

Electric units are identified by the prefix letter "E" and gas units by the prefix letter "G". Many parts are interchangeable. This will be noted under the proper prefix heading.

The second letter of the model number if "C" indicates Custom design, if "I" denotes Industry Standard design. The Custom design unit includes certain standard features (i.e. lighted control panel, load control, etc.) which are not available on the Industry Standard unit. Refer to the proper heading for parts unique to either unit.

The third (and fourth if applicable) figure(s) if "I" indicates a single oven or if "II" two stacked oven sections.

The last two figures denote the depth of the unit with 36 describing the shallow unit and 42 indicating the deep unit. This information is necessary when purchasing such replacement parts as racks or rack holders. Specific information is provided in the descriptive narrative.
